

Module M2-2 Review Quiz

1. Extended Tooltips can help you recall the steps needed to create a 3D Solid.

- a. True
- b. False

2. Which of the following is not a type of 3D Solid in the menu drop-down?

- a. Box
- b. Cone
- c. Pyramid
- d. Spring

3. Which of the following is not a progeCAD 3D Modeling tool?

- a. Revolve
- b. PressPull
- c. Loft
- d. Sweep

4. What does the Extrude command do?

- a. It pushes a 3D circle through a 3D solid to create a hole.
- b. It turns multiple 3D objects into a single object.
- c. It turns closed 2D objects into a 3D Solid.
- d. It creates another 3D Object based on the outer boundaries of a selected 3D Object.

5. What tool would you use to create a 3D Solid in the space between several cross sections?

- a. Union
- b. Loft
- c. Revolve
- d. Sweep

6. What does the Sweep command do?

- a. It cleans up leftover Splines and NURBS from memory after 3D editing.
- b. It is an alias from another CAD program that runs the PURGE command.
- c. It is a cleanup tool to be used after creating a 3D Chimney object.
- d. It creates a 3D object or surface by sweeping a 2D or 3D curve along a path.
